

YANGO · SALES OPERATIONS

My Space Task Hub + Pipeline Stage Gates

Onboarding walkthrough — what was implemented from feedback, how every flow works, and what happens behind the scenes.

RELEASE 0.2.43

PRODUCTION

Every requested capability is now connected

Nine implementation areas — one operating flow from task execution to signed-client handover.

1 Task schema

Summary, parent task, append-only events

2 Task API

Detail, scope=created, auth, events, reassign

3 Task Drawer

One editor in My Space and Lead Tasks

4 Created by Me

Creator-centric workload visibility

5 Lead fields

Pricing, amount, contract, Corp Client ID

6 Stage service

Server preflight + structured 422

7 Gate modal

Only missing fields are requested

8 Signed handover

Onboard Client + First Client Call

9 EN / HE + tests

Localized UI, gate tests, production build

Two workflows, one source of truth

My Space manages execution. Pipeline gates protect data quality and handover readiness.

MY SPACE · TASK EXECUTION

Tabs

My Tasks · Assigned · Created by Me

Task list

Due buckets, status, owner, lead

Task Drawer

Edit · Summary · Timeline

Actions

Reassign · Create follow-up

PIPELINE · CONTROLLED PROGRESSION

Move requested

Drag/drop or status change in lead drawer

Server preflight

Load lead + contacts · evaluate gate matrix

Missing?

Structured 422 → Stage Gate modal

Confirm

Patch fields + status + stage side effects

A single daily workspace for every kind of work

Personal work stays private. Lead-linked work is collaborative and auditable.

- My Tasks — private standalone tasks for the signed-in user.
- Assigned — lead tasks currently assigned to you.
- Created by Me — lead tasks you created, even when owned by somebody else.
- Notes — private personal notes; the privacy hint only appears on personal tabs.
- Scorecard — your KPI actuals versus targets.

PRIVACY RULE

“Private to you” applies only to personal tasks and notes — not lead-linked Assigned / Created by Me work.

Delegate work without losing visibility

The creator can reopen, review, reassign and follow up from the same list.

Creator scope is driven by sales_tasks.created_by_user_id

1 Create

A lead task stores both creator and assignee.

2 Delegate

The task moves to the assignee's Assigned tab.

3 Track

The creator still sees it in Created by Me.

4 Act

Open the Drawer to update, reassign or create follow-up.

One task editor everywhere

Opening a task keeps the user in context — no separate page and no duplicate editor.

- Editable: title, status, priority, due date, type and description.
- Result Summary records the outcome, not just task completion.
- Timeline is append-only: created, status, reassignment, due, summary and follow-up events.
- Deep link opens the linked lead in Pipeline.
- Personal tasks use the same Drawer pattern, without collaboration actions.

The screenshot displays a web application interface for task management. On the left is a sidebar with a 'Sales Operation' header and a 'Back to CRM' link. Below this is a 'My Space' section with a list of navigation items: Pipeline, AM Portfolio, B2B Clients Overview, Analytics, Automation, and Settings. The main content area is titled 'SALES OPERATION My Space' and contains a sub-header 'Your personal tasks, assigned work, notes, and scorecard'. It features a filter bar with 'My Tasks', 'Assigned', 'Created by Me', 'Notes', and 'Scorecard'. Below the filter bar, there are tabs for 'Open', 'Done', and 'All', with '1 open' tasks shown. A task card for 'ИПТЬБТИМ' is visible, with details in Hebrew: 'מרסין גרופ · Call · Gal Ben Zvi'. On the right, a task drawer is open, showing the task title 'ИПТЬБТИМ' and assignee 'Gal Ben Zvi · 19 Jul 2026, 18:17'. The drawer contains several sections: 'TASK' with a text input, 'STATUS' and 'PRIORITY' dropdowns (set to 'Open' and 'Normal'), 'DUE DATE' with a date picker (set to '19/07/2026, 18:17'), 'TYPE' dropdown (set to 'Call'), 'DESCRIPTION' with a text area, 'RESULT SUMMARY' with a text area and the prompt 'What was the outcome?', and 'TIMELINE' with the text 'No history yet.'. At the bottom of the drawer are buttons for 'Reassign', 'Follow-up', and 'Save task'.

Lead task Drawer · result summary and timeline are part of the task record

A controlled handoff with context

Assignee, due date and handoff comment are captured in one action.

- Select the new assignee.
- Adjust the due date when responsibility changes.
- Add a handoff comment so the new owner knows why.
- A reassigned event is appended to sales_task_events.
- The new owner receives an in-app task_assigned notification.
- Object-level authorization allows assignee, creator, lead owner or Admin.

Reassign modal appears over the task Drawer

Turn every outcome into the next action

A follow-up task remains connected to its parent through `parent_task_id`.

- Default title: “Follow-up with client”.
- Set description, due date and assignee.
- The new task is created on the same lead.
- The parent receives a `follow_up_created` timeline event.
- The Drawer can show the complete follow-up chain.
- The assignee receives the standard task assignment notification.

The screenshot displays a CRM interface with a sidebar on the left containing navigation items: Pipeline, AM Portfolio, B2B Clients Overview, Analytics, Automation, and Settings. The main area is titled 'My Space' and shows a task list with a 'Create follow-up task' modal open. The modal contains fields for Title (pre-filled with 'Follow-up with client'), Description, Due Date (format dd/mm/yyyy, --:--), and Assignee (dropdown menu showing 'Igor Kuznetsov'). Buttons for 'Cancel' and 'Create follow-up' are at the bottom. To the right, a task details panel for 'ИТЬБТИМ' shows fields for Task, Status (Open), Priority (Normal), Due Date (19/07/2026, 18:17), Type (Call), Description (ИПТЬБ), Result Summary (What was the outcome?), and Timeline (No history yet). At the bottom right of the details panel are buttons for 'Reassign', 'Follow-up', and 'Save task'.

Follow-up is created without leaving the current task context

Durable outcomes, history and task chains

The original sales_tasks model was extended without breaking existing task APIs.

No optimistic move — the server decides

The card stays in its current column until validation and persistence succeed.

Pipeline remains stable while the server evaluates the target stage

1 User requests a move

Drag/drop or lead Drawer status change.

2 Preflight

POST /leads/[id]/transition with preflightOnly.

3 Decision

Success → move. Missing → structured requirements.

4 Confirm

Modal submits fields + transition in one operation.

Commercial data now lives on the lead

The fields are staged before conversion and copied into the signed-client flow where relevant.

- Pricing / proposal — text sent to the client; required for Proposal Sent.
- Proposal amount — optional numeric value for future analytics.
- Contract number — one of the accepted signing identifiers.
- Corp Client ID — alternative signing identifier and B2B linkage seed.
- Monthly potential remains the forecast input and is required for forward progression.

The screenshot displays the 'Sales Operation' interface. On the left is a sidebar with navigation options: 'My Space', 'Pipeline' (selected), 'AM Portfolio', 'B2B Clients Overview', 'Analytics', 'Automation', and 'Settings'. The main area shows a 'Pipeline' view with three columns: 'New' (3 items), 'In Progress' (1 item), and 'Proposal Sent' (1 item). Each column contains lead cards with details like name, date, and status. A modal window titled 'Gal Lead' is open on the right, showing a form for 'Gal Taxi LTD'. The form includes fields for EMAIL, PHONE, COMPANY, CAMPAIGN, SEGMENT, MONTHLY POTENTIAL, PRICING / PROPOSAL, PROPOSAL AMOUNT, CONTRACT NUMBER, and CORP CLIENT ID. At the bottom of the modal are buttons for 'Archive', 'Delete lead', and 'Save lead'.

Lead Overview · commercial fields are editable before the transition

Requirements by forward transition

Backward moves and Rejected do not use commercial gates. Signed remains terminal.

Transition	Required before move	Why
New → In Progress	Active contact: name + email or phone Monthly potential > 0	A workable lead with forecast value
In Progress → Proposal Sent	Non-empty Pricing / proposal	Proof that the commercial offer exists
Proposal Sent → Negotiation	Open follow-up task created in the transition	Negotiation always has a scheduled next step
Negotiation → Signed	Contract number OR Corp Client ID + selected Account Manager	A signed deal is ready for handover

FORWARD SKIPS ACCUMULATE REQUIREMENTS

BACKWARD / REJECTED: NO COMMERCIAL GATES

SIGNED: TERMINAL

Ask only for what is missing

The response is structured — each missing requirement becomes a chip and an inline field.

The screenshot displays a CRM interface with a 'Sales Operation' sidebar and a 'Pipeline' view. A modal titled 'Move to Negotiation' is open, prompting the user to 'Fill the required fields to continue.' The modal contains three sections:

- Monthly potential (₪)**: A text input field.
- PRICING / PROPOSAL**: A text input field with the placeholder 'Describe the proposal sent to the client...'.
- PROPOSAL AMOUNT (OPTIONAL)**: A text input field.

Below these fields is a 'Follow-up task' section with a dropdown menu showing 'Follow-up with client' and a 'Description' text input field. At the bottom of the modal are 'Cancel' and 'Confirm move' buttons. The background shows a sales pipeline with leads in various stages, including 'New', 'In Progress', 'Proposal Sent', 'Signed', and 'Rejected'.

- Missing chips make the reason for blocking explicit.
- Inline fields are rendered only for missing requirements.
- Negotiation embeds follow-up title, due date, description and assignee.
- Signed embeds contract / Corp Client ID plus Account Manager.
- Confirm sends fields and stage payload to the transition service.
- Cancel leaves the lead untouched in its original column.

Example: Negotiation requires potential, proposal and a follow-up task

From negotiation to an owned client relationship

The transition finalizes CRM conversion and creates the first two post-sale responsibilities.

NO DUPLICATE ONBOARDING TASKS

The previous generic onboarding task was aligned to “Onboard Client”; conversion creates it once, while the transition service adds only “First Client Call” for the selected Account Manager.

APIs designed around explicit operations

The server owns validation, authorization, history and side effects.

GET /tasks?scope=created

Tasks created by the signed-in user

GET /tasks/[id]

Detail + events + follow-up chain

PATCH /tasks/[id]

Edit, summary, status or reassign

POST /tasks/[id]/follow-up

Create linked follow-up task

POST /leads/[id]/transition

Preflight or execute a stage transition

Task object authorization

Allowed when the user is:

- task assignee
- task creator
- linked lead owner
- Admin

Page-level salesPipeline access is still required first.

Structured gate error

HTTP 422 · code: "STAGE_REQUIREMENTS"

```
missing: [  
  { key: "pricingProposal",  
    label: "Pricing / proposal sent to client" }  
]
```

The client renders the modal from this response.

How the team should use the new flow

A short checklist for Sales Managers, Account Managers and Admins.

Sales / Account Manager

1. Start the day in My Space.
2. Review Assigned and overdue work.
3. Use Result Summary when closing a task.
4. Create a follow-up instead of an unlinked reminder.
5. Complete gate fields when moving deals forward.

Task creator / delegator

1. Open Created by Me.
2. Check ownership and due dates.
3. Reassign with a clear comment.
4. Review the timeline before escalation.
5. Open the linked lead for deal context.

Admin / owner

1. Keep users and roles accurate.
2. Monitor stage data quality.
3. Verify signed clients have an AM.
4. Ensure notifications are reviewed.
5. Use analytics after commercial fields are consistently populated.

THE RESULT

Every deal has a next action. Every stage has proof.

Execution

My Space centralizes personal, assigned and delegated work.

Accountability

Task events, summaries and follow-up chains preserve context.

Data quality

Stage gates require the information needed for the next phase.

Handover

Signing creates an owned client and the first AM action.
